

DE FACTO INFOTECH • PRESALES • MICROSOFT DYNAMICS 365 BUSINESS CENTRAL

Business Central proposal

Implementation of Microsoft Dynamics 365 Business Central — anchored on Microsoft Success by Design (SbD) and the Business Process Catalog (BPC).
Covers solution recommendation, business case, delivery approach, project timeline, and investment summary.

OWNER (RESPONSIBLE)

Account Director, de facto infotech

ACCOUNTABLE

Practice Head — Dynamics 365 Business Central

REVIEW CADENCE

Per opportunity; revalidated every 30 days

STATUS

Canonical

Executive summary

de facto infotech is pleased to present this proposal for the implementation of Microsoft Dynamics 365 Business Central — Microsoft's flagship cloud ERP for mid-sized businesses. Business Central unifies finance, supply chain, sales, projects, and operations on a single platform, with native integration to Microsoft 365, the Power Platform, and Microsoft Copilot.

As [Client Company Name] continues to scale, decision-making depends on a connected back office: real-time financial visibility, accurate inventory and cost data, predictable project margins, and customer information that flows end to end. Business Central delivers that connected back office out of the box, and our process-focused methodology — overlaid on Microsoft Success by Design (SbD) and the Business Process Catalog (BPC) — brings it live with minimal disruption.

To support [Client Company Name] in achieving its strategic goals, we propose implementing Business Central with the following core capabilities:

- **Financial management** — automated postings, multi-dimensional analysis, faster close, and real-time profitability.
- **Supply chain and inventory** — demand-driven replenishment, multi-location warehousing, and accurate landed cost.
- **Sales and customer management** — a unified view of quotes, orders, fulfilment, and receivables.
- **Project management** — integrated job costing, resource scheduling, and milestone billing.
- **Manufacturing and production** (where applicable) — production BOMs, capacity planning, and shop-floor execution.
- **Automation and integration** — workflows, Power Automate, Power BI, and Microsoft Copilot built in.

By implementing Microsoft Dynamics 365 Business Central with de facto infotech, [Client Company Name] will transition to a resilient, scalable, and Copilot-ready business platform that reduces manual effort, sharpens controls, and gives leadership a single source of operational truth.

How we deliver. de facto infotech is a Microsoft Solutions Partner with a delivery practice dedicated to Dynamics 365 Business Central. Our delivery runs on Microsoft's Success by Design (SbD) framework and the Business Process Catalog (BPC) — the same methodology and process taxonomy Microsoft uses internally — combined with our process-focused implementation playbook.

Why now?

Business expectations have changed rapidly. Customers want faster fulfilment, finance teams want a clean monthly close, and leadership wants connected analytics — not spreadsheets stitched together at the end of every quarter.

[Client Company Name] is experiencing increasing pressure to modernise core operations, improve data accuracy, and respond to market changes with confidence. Legacy systems, fragmented data, and manual processes are slowing down financial close cycles, inventory accuracy, project tracking, and customer responsiveness.

Microsoft Dynamics 365 Business Central, deployed on Microsoft's cloud, allows the organisation to step out of that fragmentation without rebuilding from scratch — and to start benefiting from AI-assisted operations through Microsoft Copilot from day one.

Business and project drivers

Four strategic drivers shape this implementation. Each is mapped to outcomes the platform will support, and each will be re-validated with stakeholders during the kick-off workshop.

Driver	What success looks like
Grow revenue	Improve capacity utilisation. Expand market reach across domestic and export channels. Strengthen quote-to-cash velocity so commercial teams close more, faster.
Improve profitability	Increase inventory turns. Improve fill rate. Tighten cost-to-serve and margin visibility across products, customers, and projects.
Reduce risk	Improve on-time delivery compliance. Reduce financial and operational exposure through stronger controls, audit trails, and segregation of duties.
Increase control	Improve traceability. Enhance cost and margin control. Replace spreadsheet workarounds with governed master data and approval workflows.

Key operational challenges

During discovery and our review of the current operating environment, the following recurring themes emerged. Each is addressed directly by a Business Central capability set covered later in this proposal.

Functional area	Operational challenge	Business impact
Finance	Manual data entry and duplicate work. Lack of real-time financial visibility. Difficulty closing books on time.	Risk of errors in invoices, payments, and mis-posted transactions. Delayed reporting weakens decision-making and audit confidence.
Project management	No integrated project costing. Delayed time and expense reporting. Poor visibility on resource utilisation and WIP.	Inaccurate project profitability, budget overruns, delayed billing, and inefficient resource allocation.
Procurement and logistics	Inaccurate inventory records. Weak production costing and shop-floor control. Limited visibility on landed cost.	Stock-outs and production delays; products mis-priced; purchasing decisions driven by anecdote rather than data.
Manufacturing	Inefficient production planning and scheduling. Weak WIP and shop-floor capture.	Frequent production delays; miscalculated labour and material costs; revenue leakage on long jobs.
Sales and distribution	Fragmented customer information. Sales order changes not communicated automatically across teams.	Lost sales opportunities, delayed shipments, manual reconciliation, and reduced customer satisfaction.
Service and warranty	Manual service scheduling. Poor tracking of contracts and warranty. No unified service history.	Customers wait longer; service costs rise; billing is slow and inaccurate; renewals leak.
Management reporting	Limited visibility on capacity availability. No visibility on individual project or product margin.	Inefficient resource utilisation; poor pricing decisions; slow strategic decision-making.

Business solution recommendation

The recommended solution is anchored on Dynamics 365 Business Central and structured along the eight end-to-end (E2E) business processes defined in Microsoft's Business Process Catalog (BPC) — the same standard process taxonomy Microsoft uses across all Dynamics 365 implementations. Each process is covered by standard Business Central functionality, extended where required through low-code configuration in the Power Platform — not custom code — to preserve upgradeability and total cost of ownership.

Why BPC. Microsoft's Business Process Catalog is a structured library of standard E2E business processes, business areas, and business processes published by Microsoft for Dynamics 365. Using BPC as our blueprint gives [Client Company Name] a common language with Microsoft, a faster path to fit-to-standard, and clean traceability from business outcome through to the Business Central feature that delivers it.

Record to report

Establishes the financial backbone — chart of accounts, posting groups, dimensions, and a fast, defensible close.

Business process area	Features	Business impact
Define organisational structure and accounting policies	Set up companies and legal entities, currencies, calendars, and tax jurisdictions. Configure chart of accounts, dimensions, and posting groups.	A clear, compliant structure that ensures accurate accounting from day one and supports multi-entity reporting without rework.
Manage cash	Cash flow forecasting, bank accounts, bank reconciliation, payment processing, electronic banking, and receivable handling.	Better cash visibility, fewer reconciliation gaps, and faster collections.
Manage budgets	G/L budgets, dimension-based budgets, cost budgets, and live actual-vs-budget comparison.	Issues spotted early, more accurate forecasting, and disciplined spend control.
Record financial transactions	General journals, invoices, fixed-asset journals, recurring journals, and intercompany postings.	Accurate, auditable transactions and clean ledgers.
Close financial periods	Period close, currency revaluation, intercompany reconciliation, consolidation, and elimination entries.	Faster close, higher reporting accuracy, and confident statutory submissions.

Source to pay

Standardises procurement from sourcing through payment, with controls that scale.

Business process area	Features	Business impact
Develop procurement and sourcing strategies	Sourcing methods, purchase price lists, approval hierarchies, and configurable workflows.	Consistent supplier terms, governed spend, and better commercial leverage.
Manage vendor relationships	Vendor master data, performance tracking, and subscription contracts.	Complete vendor records, reduced errors, and stronger compliance.
Procure goods and services	Blanket POs, quotes, purchase orders, OCR document capture, and email-driven approvals.	Streamlined procurement with fewer manual touches and stronger audit trail.
Manage accounts payable	Vendor invoice processing, prepayments, OCR-enabled invoicing, and payment runs.	Lower AP cost-to-serve, on-time payments, and cleaner reconciliations.

Order to cash

Connects the commercial pipeline through fulfilment to collections.

Business process area	Features	Business impact
Develop sales policies	Sales price lists and discount policies, payment terms, approval workflows, and dimension defaults.	Consistent customer terms, stronger pricing control, and clean reporting.
Manage sales orders	Blanket sales orders, quotes, sales orders and invoices, order promising, and shipping integration.	Faster invoicing, fewer errors, and a better customer experience.
Manage accounts receivable	Sales invoices, prepayments, bank deposits, subscription billing, and cash receipt journals.	Faster, more accurate billing and better visibility on receivables.
Manage credit and collections	Payment terms, credit limits, reminder terms, and corrections to unpaid invoices.	Cleaner ageing, better DSO, and disciplined credit decisions.

Project to profit

Brings discipline to project sales, delivery, and financial outcomes.

Business process area	Features	Business impact
Develop project strategy	Create job cards, planning lines, job tasks, resources, and budgets.	Centralised project definition, accurate budgeting, and stronger margin discipline.
Manage project delivery	Track expenses, time and fees, project materials, and tracked stock movements.	Real-time visibility, fewer overruns, and precise billing milestones.
Manage project financials	Review and approve estimates, manage budgets, and create project invoices.	Consistent estimates, easy planned-vs-actual comparison, and dependable revenue recognition.
Analyse project performance	Budget vs. actual, WIP reporting, and project billing analytics.	Stronger financial control, fewer unbilled hours, and better commercial decisions.

Acquire to dispose

Manages fixed assets across their full lifecycle.

Business process area	Features	Business impact
Acquire assets	Plan fixed assets, set up depreciation books, purchase assets, and record acquisitions.	Investment aligned with financial goals; streamlined procurement and capitalisation.
Manage fixed assets	Asset register and books, depreciation runs, posting groups, and maintenance records.	Accurate asset tracking, reduced manual workload, and dependable controls.
Dispose of assets	Asset replacement, disposal through journals or sales documents.	Timely replacement and clean accounting treatment of disposals.
Analyse assets	Depreciation reports, ledger entries, and multiple depreciation books.	Auditable asset history and reporting flexibility.

Inventory to deliver

Drives accuracy across warehousing, replenishment, and fulfilment.

Business process area	Features	Business impact
Manage warehouse operations	Warehouse, location, zone and bin setup, warehouse classes, and worker setup.	Controlled processes, fewer errors, and clear stock visibility across sites.

Business process area	Features	Business impact
Manage inventory levels	Inventory policies, replenishment plans, item tracking, and reorder logic.	Fewer stock-outs, lower carrying cost, and right-sized inventory.
Process inbound and outbound goods	Purchase receipts, warehouse receipts, put-aways, picks, and movements.	Improved supplier accuracy, controlled stock release, and lower storage cost.
Manage freight and transportation costs	Item charges for freight allocation, transfer routes, shipping agents, and cross-docking.	Correct COGS valuation, reduced lead time, and standardised delivery options.

Plan to produce

Aligns demand, supply, and shop-floor execution.

Business process area	Features	Business impact
Develop production strategies	Manufacturing policies, production BOMs, demand forecasts, and planning worksheets.	Removes overproduction and stockholding waste; enables accurate costing.
Plan production operations	Planning worksheet, production forecasts, simulated production orders, and order planning.	Lower planning workload; higher fill rate; balanced machine loading.
Run production operations	Production orders, item tracing, material consumption, and released production tracking.	Controlled manufacturing cost, better BOM discipline, and fewer surprises.

Service to deliver

Manages service contracts, work, and customer experience post-sale.

Business process area	Features	Business impact
Manage service assets and resources	Service items, conversion from items to service items, warranty tracking, and resource setup.	Faster service resolution, no missed contracts, and quality service experiences.
Create and process service work	Service contracts, service orders, scheduled service tasks.	Higher customer trust; fewer delays; reduced human error.
Invoice customers	Service invoices, recurring invoices, and customer-pays billing.	Labour, parts, and fees auto-calculated and billed accurately.

Business process area	Features	Business impact
Manage credit and collections (service)	Customer credit limits, payment and reminder terms, and corrections to unpaid invoices.	Cleaner receivables and disciplined service-billing decisions.

Business case

Implementing Business Central with de facto infotech is expected to deliver end-to-end financial visibility, automated supply chain execution, accurate inventory valuation, and unified reporting across the organisation. The targets below are typical post-go-live outcomes observed in comparable mid-market implementations; final targets will be agreed with [Client Company Name] during Sprint 0.

Key metric	Current	Target	Economic impact
Inventory carrying cost (% of inventory value)	18–22%	10–14%	Reduced holding cost and obsolescence — typically 15–30% savings.
Inventory turnover	4–6 turns / year	7–9 turns / year	Frees working capital and lowers warehouse cost.
Procurement cycle time	7–14 days	3–7 days	Faster purchasing reduces downtime and supports production.
Finance close time (month-end)	8–12 days	3–5 days	Eliminates manual reconciliation cost; faster reporting.
Manual transaction workload (finance and supply chain)	60–70%	20–30%	Saves labour hours; avoids hiring additional admin staff.
Order-to-cash cycle time	14–30 days	7–15 days	Faster cash flow and fewer overdue invoices.
Production / project cost variance	±20% variance	±5–8% variance	Stops revenue leakage and sharpens pricing.
Forecast accuracy (demand / procurement / production)	50–60%	75–85%	Reduces excess stock and material shortages.
Stock-out / lost-sale rate	8–12%	3–5%	Prevents lost revenue; increases customer retention.

How we use this. These are benchmarked targets — not contractual commitments. They are validated and replaced with [Client Company Name]-specific baselines during the discovery sprint, then tracked through the steering committee throughout delivery.

Implementation approach

de facto infotech delivers Business Central using an Agile methodology with a DevOps backbone — the same operating model recommended by Microsoft for cloud-first ERP. The result is a delivery rhythm that absorbs change without breaking governance, and a release pipeline that promotes only quality-checked work to production.

Agile delivery

Agile delivers the solution in short, focused iterations called sprints. Each sprint produces working, demonstrable functionality, allowing [Client Company Name] stakeholders to inspect progress, adjust priorities, and shape the solution as it takes form rather than after it lands.

Benefits we see consistently:

- **Continuous feedback** — stakeholders see and react to working software every sprint.
- **Shared accountability** — a unified project team with clear roles and joint goals.
- **Faster issue resolution** — daily stand-ups and sprint reviews surface blockers early.
- **Predictable cadence** — iterative delivery turns scope risk into manageable trade-offs.
- **Velocity** — early value released to the business while later sprints continue.

DevOps backbone

DevOps unites people, process, and tooling so that value flows continuously from idea to production. By bringing Development, Test, and Operations into a single loop, we shorten feedback cycles and improve quality at every stage of the application lifecycle. Throughout the implementation, the DevOps pipeline manages source control, environment promotion, automated testing, and release governance for Business Central — all aligned to Microsoft Lifecycle Services and Azure DevOps.

Microsoft Success by Design

de facto infotech delivers every Business Central engagement using Microsoft Success by Design (SbD) — Microsoft's prescriptive guidance framework for Dynamics 365 implementations. SbD provides a phased lifecycle, a defined set of workshops, and quality gates that anchor solution risk to Microsoft's own field-tested patterns rather than to one partner's opinion.

The framework is organised in four phases, each anchored to specific workshops and a stage-gate review. SbD runs in parallel to our process-focused methodology — the two are deliberately complementary.

The four phases

Phase	Purpose	Primary outcome
Initiate	Anchor the engagement: confirm scope, KPIs, stakeholders, and target architecture.	Solution Blueprint signed off by the steering committee.
Implement	Iterative configuration and build sprints — fit-to-standard first, extensions where justified.	A configured, integrated solution that has passed functional QA and security review.
Prepare	Cutover plan, performance validation, UAT, and go-live readiness.	A go / no-go decision supported by evidence, not optimism.
Operate	Hypercare, defect triage, performance tuning, and transition to managed support.	A stable production system with a backlog and roadmap for continuous improvement.

Key Success by Design workshops

Each workshop has a Microsoft-defined entry checklist, agenda, and exit criteria. de facto infotech facilitates every workshop and records outcomes in the central solution log.

Workshop	Phase	What it produces
Solution Blueprint Review	Initiate	An end-to-end view of the proposed solution — scope, architecture, integrations, data flows, and assumptions — reviewed against Microsoft's reference patterns.
Process Workshops (per BPC area)	Implement	Fit-to-standard decisions for each Business Process Catalog area, with gaps logged and ranked by business value.
Integration Architecture Workshop	Implement	A signed-off integration design covering interfaces, transport, error handling, and monitoring.
Data Migration Workshop	Implement	A migration plan with source-to-target mapping, cleansing rules, cutover strategy, and reconciliation criteria.

Workshop	Phase	What it produces
Security and Compliance Workshop	Implement	A security model — roles, permissions, segregation of duties — aligned to the audit and compliance posture.
Intelligence and Analytics Workshop	Implement	Reporting and analytics scope — standard reports, Power BI dashboards, and the analytics data model.
Test Strategy Workshop	Implement	A test pyramid covering unit, integration, regression, UAT, and performance — with entry / exit criteria for each.
Solution Performance Workshop	Prepare	Performance targets validated under realistic load — from response times to batch windows.
Cutover Plan Workshop	Prepare	A minute-by-minute cutover runbook with owners, rollback triggers, and freeze windows.
Go-Live Readiness Workshop	Prepare	A signed go / no-go decision supported by evidence across functional, technical, data, training, and support readiness.

How we run SbD. All Success by Design workshop outputs are co-owned. de facto infotech facilitates and documents; [Client Company Name] sponsors and signs off. Microsoft FastTrack engagement managers are invited where eligible — a benefit available through our Solutions Partner status.

Process-focused methodology

Inside the Success by Design phases, de facto infotech overlays our proven process-focused methodology. We treat business processes — not features — as the unit of design, delivery, and acceptance. That keeps the project anchored to outcomes the business will actually feel, and it gives every SbD workshop a clear, repeatable input.

Business process mapping and management

- **Identification and analysis** — document existing finance, supply chain, inventory, and operations processes to find inefficiencies and improvement areas.
- **Optimisation** — refine processes to improve efficiency, reduce errors, and increase automation.
- **Alignment** — configure Business Central to support optimised workflows across accounting, procurement, inventory, sales, and projects.

Process-centric implementation lifecycle

- **Framework utilisation** — documented processes drive every implementation phase: design, build, test, train, and post-go-live support.
- **Consistency and communication** — uniform implementation across modules and clean stakeholder traceability.

Standardisation and quality assurance

- **Process standardisation** — standardised workflows for finance, supply chain, and operations across departments.
- **Quality assessment** — regular performance monitoring to maintain quality and drive continuous improvement.

Optimisation opportunities

- **Process modelling** — map current and future operational processes to identify automation and efficiency gains.
- **Fit-to-standard analysis** — favour Business Central's out-of-the-box capabilities; reserve customisation for true competitive differentiation.

Four-step delivery

de facto infotech's process-focused implementation for Microsoft Dynamics 365 is structured around a four-step delivery loop — Discover, Design, Deliver, Drive. Each step ends with a formal stage gate that the steering committee signs off before the next step begins.

Project timeline

The high-level timeline below is indicative and assumes a single-entity deployment with up to two integrations. Activities are mapped to Microsoft Success by Design phases — Initiate, Implement, Prepare, Operate — so progress can be tracked against Microsoft's standard lifecycle. Final dates will be confirmed during Sprint 0 and tracked through the steering committee.

Activity	SbD phase	Indicative timing	de facto infotech team
Sprint 0 — Discovery and Solution Blueprint Review	Initiate	[Week 1–2]	Account Director, Solution Architect, Project Manager
Business process review (BPC fit-to-standard) and alignment	Implement	[Week 2–4]	Solution Architect, Functional Consultants
Define financial, inventory, and operational KPIs	Initiate / Implement	[Week 3–4]	Project Manager, Functional Consultants, Data Analysts
Configure Business Central modules (Finance, Sales, Purchase, Inventory, Fixed Assets, Projects)	Implement	[Week 4–10]	Solution Architect, Functional Consultants, Technical Consultant
Data migration, integrations, security model (SbD workshops)	Implement	[Week 6–12]	Data Migration Specialists, Integration Consultants, Solution Architect, Technical Consultant
Test strategy, QA, UAT, performance validation	Implement / Prepare	[Week 12–14]	Functional and Technical Consultants, QA Specialist, Project Manager, Solution Architect
Cutover plan and Go-Live Readiness Workshop	Prepare	[Week 13–14]	Project Manager, Solution Architect, Functional and Technical Consultants
User orientation and training (go-live readiness)	Prepare	[Week 13–14]	Functional and Training Consultants, Technical Consultant, Project Manager
Go-live and hypercare	Operate	[Week 15–18]	Functional and Support Consultants, Technical Consultant

Sprint 0. Sprint 0 typically lasts two weeks. Its primary output is a confirmed delivery plan, validated KPIs, a signed-off scope baseline, and the integration / data migration playbook for the remainder of the engagement.

Investment summary

The investment summary below recommends licence and service costs for the proposed scope. Licences are sold through de facto infotech as a Microsoft Cloud Solution Provider (CSP); implementation services are quoted as fixed-fee per workstream with explicit assumptions.

Proposal element	No. of users	One-time fee	Monthly subscription per user	Remarks
License — Dynamics 365 Business Central Essentials	[#]	—	\$80 / user / month	Finance and SCM. Cloud subscription, billed annually.
License — Dynamics 365 Business Central Premium	[#]	—	\$110 / user / month	Finance, SCM, manufacturing, and service management.
License — Team Members	[#]	—	\$8 / user / month	Light-use roles: read, approve, and limited write.
Implementation — Requirements gathering and FRD	—	[INR / USD]	—	Discovery, fit-gap, and Functional Requirement Document sign-off.
Implementation — System configuration	—	[INR / USD]	—	Configuration of agreed scope across in-scope modules.
Implementation — Data migration	—	[INR / USD]	—	Master and opening-balance migration with sign-off cycles.
Implementation — Integrations and extensions	—	[INR / USD]	—	Up to two integrations and approved AL extensions.
Implementation — UAT support	—	[INR / USD]	—	Scenario testing, defect triage, and UAT exit.
Implementation — Training and user adoption	—	[INR / USD]	—	Role-based training, train-the-trainer, quick-reference cards.
Implementation — Go-live and hypercare	—	[INR / USD]	—	Cutover, hypercare, and transition to support.
Total investment	—	[INR / USD]	[USD / user / month]	Excludes taxes; licenses billed by Microsoft directly under a CSP agreement.

Commercial assumptions

- All amounts are exclusive of applicable taxes (GST or equivalent).
- Licences are billed annually in advance; implementation services are billed against milestones.
- Any change in scope agreed during delivery will be handled through the change-control process detailed in the Statement of Work.
- This proposal is valid for 30 days from the date of issue.

Why de facto infotech

de facto infotech is a Microsoft Solutions Partner with a dedicated Dynamics 365 Business Central practice. We pair functional depth with industry experience, governed methodology, and a delivery team built around the customer outcome — not a generic resourcing model.

What you get from the partnership

- A Microsoft-aligned delivery model — same Success by Design framework, same Business Process Catalog, same release discipline Microsoft uses internally.
- Senior architects on the engagement from day one — not after escalation.
- A practice that goes beyond go-live — managed services, optimisation, and Microsoft Copilot enablement after stabilisation.
- Transparent governance — joint steering committee, single risk register, and a single backlog of truth.

Our credentials at a glance

Capability	Detail
Partnership	Microsoft Solutions Partner — Business Applications.
Practice depth	Dedicated D365 Business Central consulting and engineering team.
Delivery footprint	Implementations across manufacturing, distribution, services, and projects.
Geography	India-headquartered with delivery to APAC, the Middle East, and Europe.
Methodology	Microsoft Success by Design (SbD) framework and Business Process Catalog (BPC) — run on every engagement.
Adjacencies	Power Platform, Microsoft 365, Azure, and Microsoft Copilot enablement.

Next steps

To move forward, we propose the following short, time-boxed sequence:

1. Joint review of this proposal with the [Client Company Name] steering group — typically a 60-minute working session.
2. Walkthrough of two reference scenarios in Business Central tailored to [Client Company Name]'s top three pain points.
3. Refinement of scope, commercial terms, and go-live target in a one-week working window.
4. Signature of the Statement of Work and Sprint 0 (Solution Blueprint Review) kick-off — typically within two weeks of the working session.

Mobilisation. On signature, our delivery team is mobilised within five working days. Sprint 0 (the Solution Blueprint Review under Success by Design) begins inside two weeks.

Your de facto infotech contacts

Name	Role	Contact
[Account Director]	Account Director — single point of contact	[email] / [phone]
[Solution Architect]	Solution Architect — Dynamics 365 Business Central	[email] / [phone]
[Project Manager]	Engagement Project Manager	[email] / [phone]

Thank you for the opportunity to partner with [Client Company Name] on this transformation. We look forward to your feedback.
